Air and Clean Energy

I am Arya from Dr. Güngör Özbek Secondary School Of Turkiye. Air pollution is a huge issue. Air becomes polluted by cars and industrial areas. This is harmful to people and nature.

By using renewable sources of energy, we can save our planet. For instance, solar energy is obtained from the Sun while wind power uses wind to generate electricity. We can cycle or walk to save the environment.

Air and Clean Energy

I am Theodoros from 2nd Secondary School of Agrinio.

Protecting our atmosphere is essential for a healthy life. We can achieve this by reducing our reliance on fossil fuels and embracing renewable energy sources, like solar and wind power.

By switching to cleaner alternatives and planting more trees, we can significantly decrease air pollution. Taking care of the air we breathe ensures a sustain future for our planet. I think we must use electric vehicles that are more eco friendly. Alternatively we can use public transport such as trains or buses.

Climate Action and Awareness

I am Maria from 2nd Secondary School of Agrinio

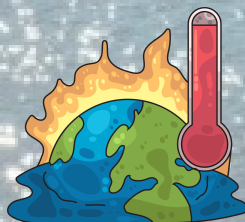

I think our schools must call experts to inform us about climate change and the means to prevent it. Young people must be aware of the dangers of pollution and the best place to make them aware is school. Climate change and environmental problems affect our planet and our lives. It is important to inform citizens and help them understand how to protect the environment. Schools can teach students about recycling, saving energy, and reducing pollution. Social media and TV can share simple messages about protecting nature. Communities can organize clean-up days and plant trees. When people are informed, they can take small actions every day to protect the earth.

Climate Action and Awareness

I am Georgios from 2nd Secondary School of Agrinio

In my belief, to take action, we should post on social media platforms about the consequences of climatic change (of course if you have social media platforms). In addition, we can give some of our money to institutions where their goal is to inform and stop climatic change.

Forests and Recycling

I am Yagmur from IYD Kuscular Secondary School of Turkiye.

To protect our forests, we should not pollute the environment, and we must prevent forest fires because oxygen, which is one of the sources of our lives, comes from the trees in our forests. For example, keeping the environment clean is very important for us, animals, and nature. Even a piece of broken glass can cause many trees and living creatures to disappear. To prevent such situations, we can throw waste into recycling bins; in other words, we can put glass into glass bins, plastics into plastic bins, and batteries into battery bins. Let's protect our forests. Remember, forests are our source of life.

Forests and Recycling

Hello! My name is Sara and I'm from Romania
"Spiru Haret" School.

Forests are very important for nature and people. They produce oxygen, clean the air, and provide shelter for many animals. Nature gives us beauty and essential resources for life.

Recycling is one of the best ways to help the environment. When we recycle paper, plastic, and glass, we reduce pollution and save natural resources.

If we take care of forests and nature, we will have a cleaner environment and a healthier future!!

Water and Oceans

I am Ediz from Dr. Güngör Özbek Secondary School of Türkiye.

Water is very important for all living things. People, animals, and plants need water to live. We drink water every day, use it for cooking, cleaning, and growing food. Without water, life on Earth would not exist.

Unfortunately, many people waste water without realizing it. Some people leave the tap open or pollute rivers, lakes, and seas. Because of this, clean water is becoming less and less every year. Many people around the world do not have enough clean water to drink. This is a serious problem for our future.

We should understand the value of water and protect it. Even small actions can help a lot. We can turn off the tap while brushing our teeth, take shorter showers, and use only the water we need. We should also keep rivers, lakes, and seas clean by not throwing trash into nature.

Water is life, and every drop is precious. If we protect water and water resources today, future generations will have a healthier and happier world tomorrow.

Water and Oceans

I am Anna from 2nd Secondary School of Agrinio.

Water is the most precious resource on Earth, as it is a essential for all living

organisms. Unfortunately, our oceans, rives and lakes are constantly being polluted by plastic waste and chemicals. This damage kills aquatic

life our sources of clean water .To protect our planet, we must got immediately. We can start

by reducing plastic use, recycling more, and never throwing trash into the water . Saving

water at home and keeping our beaches clean are small steps a huge difference. If we protect our water today we ensure a healthy future for everyone. Ocean pollution threatens the life of

sea creatures. I think we must oblige ship companies to use less fossil fuels and not dispose their garbage into the ocean.

Teachers' Message

As the founders and partners of the "Plan B: There is no Planet B" project, we are incredibly proud of all our students from **Turkiye, Greece, Romania, and Poland.**

Throughout this project, you have shown great teamwork, creativity, and a deep understanding of environmental issues. From clean energy to protecting our oceans, your ideas in this manifesto prove that the future is in good hands.

Remember, even the smallest actions can create big changes.

Let's keep our promise to nature because we only have one home.

Thank you to all our eco-friendly students!

Mehmet, Ioannis, Semra, Elena, Magda
